# Crafts with the Explorium

# DIY TORNADO IN A BOTTLE

**Materials**

- (2) 2-liter clear plastic bottles
- Water
- Duct tape

**Procedure**

1. Fill one of the plastic bottles about  $\frac{3}{4}$  full of water.
2. With the duct tape and help from an adult tape the top of the empty bottle to the top of the bottle with the water.
3. Make sure the tape is secure around the bottle tops, as you don't want any water leaking out.
4. Tip the water-filled bottle upside down while twirling it in a circular pattern for about 10 seconds.
5. Stop twirling the bottles and watch as a funnel cloud will form in the top bottle and the water will funnel into the bottom bottle.
6. Flip the bottles over again and repeat the process as many times as you want to enjoy watching your tornado inside!

**How Does It Work?**

Weather is a description of what is happening in Earth's atmosphere. A change in wind direction and wind speed at high altitudes causes the air to swirl horizontally. Rising air from the ground pushes up on the swirling air and tips it over. The funnel of swirling air begins to suck up more warm air from the ground. The funnel grows longer and stretches toward the ground. Tornadoes are spinning, funnel-shaped columns of air that stretch from thunderclouds to the ground.

# Explore the Horses at “Everything Equine”

All are welcome to experience a free equine exhibition on **Saturday, March 16 from 11 a.m. – 1 p.m.**, at the Midway University Equestrian Center. “Everything Equine” is a hands-on opportunity for people to learn about a day in the life of a horse and talk to professionals and students who spend their daily lives caring for these majestic animals. The event is co-sponsored by the Woodford County Library and Midway University’s Equine Studies Program.
